Pearl Echo.Suite

Pearl Echo.Suite enables organizations to set user-level monitoring and Internet access policies in desktop/laptop environments, in server-centric environments such as Citrix and Terminal Server or in mixed environments where employees are accessing the Internet through both terminal services and desktops/laptops. Pearl Echo's Internet monitoring, filtering and control solution captures the users' web browsing, file downloads and uploads, chat, IM and e-mail including text and encoded attachments. Pearl Echo can monitor keywords, phrases and text patterns to protect against the dissemination of confidential information. Pearl Echo can also control timed access to application executables and set restrictions based on daily bandwidth usage.

How Pearl Echo.Suite Works

Pearl Echo.Suite's unique Employee Internet Management technology is based on an independent agent-server architecture. By creating an independent service, Pearl Echo is not reliant on proxies or firewalls and is not affected by high traffic volumes, how users access the 'Net or where they are physically located. In this way, Pearl Echo helps companies monitor users in the office or off the corporate network, such as telecommuters or traveling salespeople.

Benefits

☑ Reduces security threats by eliminating access to their sources and increasing visibility into employee communication patterns.
☑ Creates regular management, group and individual activity usage reports that help organizations and individuals manage their time.
☑ Addresses the need to do more with increasingly constrained IT budgets by reducing total cost of ownership through the use of automated systems integration, self-maintenance and "out of the box" deployment.
☑ Extends Internet management to multiple locations, as well as roaming, teleworking and mobile users.
☑ Reduces litigation exposure by insuring that internal Compliance programs have the information needed to identify, monitor and audit inappropriate activities.

Pricing

The full Pearl Echo.Suite is available for purchase as a one-time (not subscription) license based on a license fee per seat. Licensing begins at $71.95 per seat with significant discounts starting at 50 seats. In addition, key Pearl Echo.Suite functions are available as stand-alone modules which can be purchased individually for more targeted use.
