

Echo•Filters Hosted Service

Echo•Filters Hosted Service is an entry level Web filtering service that provides you with the power of Pearl Software's Echo•Filters™ URL filtering module. This one-size-fits-all solution is ideal for organizations that require an inexpensive, yet far-reaching Web filtering solution.

How Echo•Filters Hosted Service Works

When users visit a Web site, they typically type or click on a Web address that identifies the site by name. The site on the Internet, however, does not exist by name but rather by a unique IP address. All Web browsers and Web enabled applications use the Domain Name System (DNS) to associate these numeric IP addresses with their more meaningful and descriptive domain names. The Echo•Filters Hosted Service becomes your organization's DNS server. Our DNS servers have the additional capability to determine if a Web site is safe or harmful before it returns the Web site's IP address.

Benefits

- Nothing to Install; No Software or Hardware
- Nothing to Maintain
- Configured in Minutes
- Inexpensive
- Strict Blocking Policy
- Platform Independent; Works with all Devices & Operating Systems Whose DNS You Manage
- Secure

Pricing

The Echo•Filters Hosted Service is charged monthly based on the number of users in your organization. There are no minimum commitments to the length of service and no penalties or termination fees should you decide to cancel your service.

Plan	Users	Total Price
Level A	1 to 99 Users	\$ 99 / Month
Level B	100 to 249 Users	\$199 / Month
Level C	250 to 500 Users	\$299 / Month

An activation fee of \$39.00 will be applied at time of sign up. Should you wish to cancel service, billing will cease without penalty. Final month's charges are not prorated should you decide to stop service.
