PEARL SOFTWARE INTRODUCES CYBER SNOOP PRO: The Monitoring Software That Allows Businesses to Provide Internet Access While Ensuring Protection of Corporate Resources and Property

PC Magazine's Editors' Choice 1998

Exton, PA - July 7, 1998: Pearl Software, Inc., a leader in Internet software utility products, has announced today the release of Cyber Snoop Pro, the leading monitoring and control software. Cyber Snoop Pro provides employers the peace of mind that employees are being supervised while on the Internet, and that corporate tangible and intangible property is being protected.

A leading manufacturer of Internet monitoring software for the education and home markets, Pearl Software identified a need within the corporate and government sectors for a means through which employers can supervise their employees' Internet use. According to Nielsen Media Research, employees at IBM, Apple, & AT&T collectively spent 350 eight hour days in one month visiting pornography web site "Penthouse" (Baltimore Business Journal, 2/18/98). Cyber Snoop Pro is a tool that allows employers to protect themselves from common dangers and abuses such as this.

Cyber Snoop Pro allows you to retrace every step an Internet user makes by creating a complete audit trail of Internet activity. In addition to monitoring the World Wide Web, Cyber Snoop Pro also monitors Ftp, News, Chat, and E-mail. The Quick Link™ feature allows the administrator to automatically link back to the actual Web sites the user visited. It also restores the text of incoming and outgoing News, E-mail and Chat items, allowing the supervisor to maintain a history of all Internet activity for review.

The software features powerful log export capabilities which allow corporations to combine the power of Cyber Snoop's monitoring with the power of common spread sheet analysis tools. The software also features Web-Chat restoration tracking, and a keyword blocking option which helps safeguard against dissemination of any confidential corporate information. Further, Cyber Snoop Pro provides user-defined Allow and Block

lists categorized by Web sites, FTP resources, e-mail addresses, newsgroups, and chat groups.

Cyber Snoop Pro also captures the Windows user name for display in the Cyber Snoop Pro Log, allowing employers to monitor machines with multiple users. In addition, Cyber Snoop Pro features both administrative and user level logins. The user level can view the log, and reset the system if files have been tampered with. The administrative level can set and change security levels for the user.

The United States government can benefit from Cyber Snoop Pro as well, by carefully monitoring general public resources and property for potential abuse, and providing safety features to specific departments.

The software retails for \$59.95, and is being distributed by Pearl Software directly (1-800-PEARL96). The software operates on a Windows 95, 98 and NT platform.

Pearl Software is known throughout the industry as a leader in Internet software utility products, and is quickly gaining recognition. Its product line focuses on providing network enabled solutions that will allow the Internet to proliferate as a commercial and educational medium, while providing a powerful means to protect the privacy and safety of those accessing it.
