PEARL ECHO WEB FILTERING NOMINATED FOR SC MAGAZINE HONOR

Exton, PA – September 28, 2006 - Pearl Software, Inc., a leading provider of Employee Internet Monitoring and Web Filtering software announced that its innovative Pearl Echo-Suite™ has been nominated for the 2007 SC Magazine Reader's Trust award in the Best Web Filtering category. The Excellence Awards recognize leading products and companies as decided by a panel of industry luminaries from the analyst and end-user communities.

"We are excited to be included with our Web Filtering peers in this respected trade journal," said David Fertell, Pearl Software's CEO. "Early on, our company was recognized by the Clinton administration as the prototypical Internet *monitoring* solution used to manage user Internet access. In response to customer requests, over the past ten years we have added various Internet controls to our solutions – including Web Filtering. It's heartening to receive this accolade by SC Magazine's audience for a product built on the user community's feedback."

Pearl Echo-Suite is an e-communications monitoring, filtering, and control solution enabling effective management of employee Internet usage in mobile, desktop and server-centric environments. Echo-Suite actively captures employee web browsing, file transfers, news, chat, IM, e-mail and web-mail, including all encoded attachments. Internet access permissions can be set at the group and user level, based on time controls, keyword triggers, allow-lists, block-lists and a dynamic library of web domain category filters. More information on Pearl Software and its suite of products can be found at <http://www.pearlsw.com>.

About Pearl Software

Pearl Software was founded in 1996 by David Fertell and Joe Field. The company provides Internet monitoring, filtering and control products to the growing Internet user community. Pearl Software's key patent-pending products include Pearl Echo-Suite™, Website-Echo™ and IM-Echo™. The company also offers browser control software, TakeMeHome™ and partners with law enforcement to extend the application of its remote and mobile Internet monitoring and control capabilities.
