### **PEARL SOFTWARE'S DESKTOP, MOBILE LAPTOP, HOSTED AND THIN-CLIENT WEB FILTERING SOLUTIONS ARE NOW AVAILABLE ON GSA SCHEDULE**

---

**Exton, PA – June 13, 2008** - Pearl Software, Inc., announced that it now offers all of its innovative e-communications monitoring and control solutions on a GSA Schedule. This move allows all federal, state, local and tribal government agencies to conveniently purchase Pearl Software's industry leading web filtering solutions at pre-negotiated, most-favored pricing. The move will also offer customers shorter lead-times and lower administrative costs when acquiring Pearl's products. In addition, ordering activities have the opportunity to meet small business goals while promoting compliance with various environmental and socioeconomic laws and regulations.

Pearl Software's Internet monitoring and control solutions enable government agencies to set user-level monitoring and Internet access policies in a client-server, server-centric and peer-to-peer computing environment. Pearl's solution monitors each user's Web browsing, file transfers, news, chat, e-mail and instant messaging. Its capabilities extend far beyond standard Internet mail to include management of Microsoft Exchange mail and Novell GroupWise. Pearl also monitors keywords and phrases to protect against the dissemination of confidential information in Web postings, blogs, IM, e-mail and even in encoded e-mail attachments.

With a click of a mouse, Pearl Software allows you to easily view how much time users are spending online. For in-depth analysis, Pearl includes an enterprise-class report manager with a Quick-Link™ feature that automatically links to visited websites and restores all text from outbound and inbound e-mail, IM and news group postings. The Pearl Report Manager consists of over seventy five standard reports that can be customized and run interactively or be scheduled for automatic generation and distribution based on your existing Directory users and groups.

Pearl's powerful Mobility Monitor™ accommodates government agencies who are concerned about the continuity of their Internet usage policies extending beyond the agency's internal network. Pearl also caters to thick or thin client workstations in Terminal Services and Citrix MetaFrame environments. Pearl's flexible design ensures simple deployment yet can handle the most complex and evolving network infrastructures.

When asked about this latest announcement, David Fertell, Founder and CEO of Pearl Software, responded "Pearl Software has been providing major government organizations with solutions that address their specific Internet monitoring and control requirements for more than 10 years and I'm pleased we now have a vehicle that will allow various agencies to move forward with our solution even faster." More information on Pearl Software's Internet monitoring and control solutions can be found at <http://www.pearlsw.com>.

## **About Pearl Software**

Pearl Software was founded in 1996 by David Fertell and Joe Field. The company provides Internet monitoring, filtering and control products to government agencies, corporations, hospitals, schools and libraries throughout the world. Pearl Software's key patent-pending products include Pearl Echo®, Website-Echo™ and IM-Echo™. The company also offers browser control software, TakeMeHome™ and partners with law enforcement to extend the application of its remote and mobile Internet monitoring and control capabilities.
