PEARL ECHO WINS TOPTENREVIEWS GOLD AWARD

Exton, PA – January 14, 2010 - Pearl Software announced that TopTenREVIEWS ranked Pearl Echo® #1, selecting it as the Gold Award winner in Internet Management Software. The roundup included ten other products designed to monitor employee Internet access. In a side-by-side comparison, Pearl Echo out-performed the competition. As stated by the review, "Pearl Echo is truly outstanding Internet management software."

"Pearl Echo's powerful features make it not only a powerful administrative tool, but also powerful security against breaches and what might implicate your company in legal suits," notes the review. "For the ultimate Internet Management Software, Pearl Echo ranks highest on our TopTenREVIEWS list."

Pearl Echo monitors each user's web browsing, file transfers, news, chat, e-mail and instant messaging. Pearl Echo allows managers to easily view how much time users are spending online. The Internet management software includes an enterprise-class report manager that automatically links to visited web sites and restores all text from outbound and inbound e-mail, IM, blog and news group postings.

Pearl Echo's patented Mobility Monitor™ manages Internet activities regardless of how the computer connects to the Internet; even if it is beyond the confines of an internal network. This is appealing to forward-thinking organizations that recognize the need to expand their Internet use policies beyond their physical network. Pearl Echo simplifies the management and enforcement of an organization's access rules to telecommuters using the 'Net from home and laptop users connecting at airports, Starbucks® or any other readily available public "hotspot".

"It was nice to see our solutions go up against products like Spector, eBlaster and others," stated Joe Field, Pearl Software's CTO. "The review was extremely thorough, took over half a year to complete and we are very pleased that we continue to maintain our leadership position in this very challenging area of network security."

About Pearl Software

Pearl Software was founded in 1996 by David Fertell and Joe Field. The company provides Internet monitoring, filtering and control products to government agencies, corporations, hospitals, schools and libraries throughout the world. Pearl Software's key patented and patent-pending products include Pearl Echo® and Website-Echo™. The company also offers browser control software, TakeMeHome™ and partners with law enforcement to extend the application of its remote and mobile Internet monitoring and control capabilities.
