PEARL SOFTWARE EXPANDS INTERNET MONITOR CAPABILITIES.

Bandwidth and Application Control a Key Focus in Internet Monitor Software

Exton, PA – March 24, 2011 - Pearl Software, Inc., announced the release of Version 10.0 of Pearl Echo, its leading **Internet Monitor** and Web Filter software. This latest release extends the product's **Internet Monitor** and Web Filter focus to include bandwidth limits and application time controls.

"With tighter budgets and a growing International customer base, we are seeing a growing focus on bandwidth premiums," stated David Fertell, Pearl Software's President.   "Echo-bandwidthControl™ is our new bandwidth use monitor and control product that will be included in our Pearl Echo Suite **Internet Monitor** solution. As part of the product's evolution, we are also excited to include application control capabilities. Taking advantage of the light footprint we already have on the workstation, Echo-appControl™ provides managers with the ability to control access to any executable program residing on end-user's workstations." Pearl Echo Suite Version 10.0 includes the capability to control time spent not only online but on any application an end user may launch. Access can be completely blocked to games or file sharing programs and a daily time allotment can be specified to non-restricted programs.

Pearl Echo is an **Internet Monitor**, Web Filter and Access Control solution enabling effective management of employee Internet usage in mobile, desktop and server-centric environments. Pearl Echo actively captures employee web browsing, file transfers, news, chat, IM, e-mail and web-mail, including all encoded attachments. Pearl Software's patented Mobility Monitor™ technology provides real-time review of email, chat and IM content. Internet access permissions can be set at the group, user and computer level, based on time controls, keyword triggers, allow-lists, block-lists and a dynamic library of web domain category filters.   More information on Pearl Echo's features including Version 10.0 enhancements can be found on Pearl Software's web site.

About Pearl Software

Pearl Software was founded in 1996 by David Fertell and Joe Field. The company provides Internet Monitor, Web Filter and Access Control products to government agencies, corporations, hospitals, schools and libraries throughout the world. Pearl Software's key patent-pending products include Pearl Echo®, Website-Echo™ and IM-Echo™. The company also offers patented browser control software, TakeMeHome™ and partners with law enforcement to extend the application of its remote and mobile Internet monitor and control capabilities.
