

IM.Echo™

IM.Echo provides network administrators with an efficient means to capture, block and allow chat and IM usage. IM.Echo enables administrators to control IM traffic based on an approved list of contacts. An easily administered list of keywords, phrases and text patterns can also be created to assist in controlling the sending or receiving of inappropriate content. The IM.Echo module gives administrators the option to decide if a user or group of users will be allowed to participate in IM sessions with users outside of their network. These controls can be adjusted to meet certain time periods so that IM usage can be confined to specific hours. This highly flexible product archives and organizes all IM content and provides basic reporting so that administrators can maintain a log of IM activity.

How IM.Echo Works

IM.Echo's unique Employee Internet Management technology is based on an independent agent-server architecture. IM.Echo monitors and controls access to the most popular forms of chat and IM including MSN Messenger, Windows Live Messenger, AOL's Instant Messenger, Yahoo! Messenger, ICQ Instant Messenger, GroupWise Messenger and Web-based chat. In addition, IM.Echo manages and controls access to standards-compliant chat and IM sessions including SIP-based IM and IRC chat.

Benefits

- Monitors, organizes and archives all IM activities including attempts to circumvent policy.
- Supports network security, regulatory compliance and employee conduct programs.
- Controls the internal use of IM through an authorized user list developed by management.
- Designates users who have permission to communicate with IM users outside the enterprise to facilitate IM communications with customers, vendors and trading partners.
- Assures IM usage is confined to specific hours or locked down in non-working hours to designated users or groups.
- Extends Internet management to multiple locations, as well as roaming, teleworking and mobile users.
- Reduces litigation exposure by insuring that internal Compliance programs have the information needed to identify, monitor and audit inappropriate activities.

Pricing

IM.Echo is sold under a perpetual license based on a license fee per seat. Licensing begins at \$29.95 per seat. Access to technical support is provided during the initial implementation at no charge. Maintenance agreements are available for one or more years and entitle the license holder additional access to technical support as well as all major and minor product releases of IM.Echo.
